## Objective

This is a Career Development Course to take a person from basic .NET know how to Advanced Web Development to Get Ready for an IT Job.

## When to Attend

- When you are planning a serious career in Software Engineering
- When you intend to improve your employability with the IT employers

## Benefits

- Exposure to IT essentials
- Exposure to industry standard Software Development Life Cycle with ASP .NET - C#
- Successful Completion of final Semester curriculum Project Work
- An opportunity to work in real time environment on Live Projects (ISO, CMMI)
- Exposure to complete Software Development Life Cycle (SDLC)
- Improved Placement Opportunities
- Recruitment opportunity with Software Division
- Free Resume posting on our job portal

## Contribution towards Microsoft Certification Exams

- 70-536 TS: Microsoft .NET Framework 2.0–Application Development Foundation
- 70-562 TS: Microsoft .NET Framework 3.5, ASP.NET Application Development

## Pre-requisites

Candidates should be very familiar with Visual Studio 2005 or later and the .NET Framework classes that are related to ASP.NET and ADO.NET. In addition, candidates should have a good grasp of ASP.NET AJAX.

## Duration

4 Months

## Courses Covered

Code	Title
CC-106	Project Initiation
CC-107	System Analysis
CC-108	System Design
CC-112	Core Foundations of Microsoft .NET 2.0 Development
CC-412	Microsoft .NET Framework 3.5, ASP.NET Application Development
CC-109	Project Development
CC-110	Software Testing
CC-111	Deployment

## At Course Completion

After completing this course, students will be able to:

### Analysis

1. Domain understanding
2. Broad Scenario In Requirement Analysis
3. Inputs and Outputs for Requirement Analysis
4. Work Flow for Requirement Analysis
5. Software Requirements Specifications
6. Mock-Up Design

### Design

1. What is Design Phase.
2. Purpose of Design Phase.
3. Input and Output of Design phase.
4. Workflow
5. System Architecture design
6. Database Normalization

### Core Foundations of Microsoft .NET 2.0 Development

1. Understand the purpose and components of the .NET 2.0 Framework and the common language runtime.
2. Understand and use the .NET Framework 2.0 common type system (CTS).
3. Understand basic language syntax for decision structures, loop structures, and variables.
4. Write code by using language-specific functionality such as the My. classes for Visual Basic.
5. Understand and use classes, objects, methods, properties, and functions.
6. Write code to implement overridden methods, static (Visual C#) or Shared (Visual Basic) methods, and properties.
7. Use type conversions and text conversions.
8. Create and use solutions and projects by using Visual Studio 2005.
9. Use the Visual Studio 2005 object browser and the Visual Studio help system.

### Microsoft .NET Framework 3.5, ASP.NET Application Development

1. Configuring and Deploying Web Applications
2. Consuming and Creating Server Controls
3. Programming Web Applications
4. Working with Data and Services
5. Troubleshooting and Debugging Web Applications
6. Working with ASP.NET AJAX and Client-Side Scripting
7. Targeting Mobile Devices

### Software Testing

1. Fundamentals of Software Testing
2. Software Development Life Cycle
3. Testing Terms
4. Verification and Validation
5. Types of Testing and Levels of testing
6. Testing Life Cycle
7. Test Planning and Management
8. Quality Management
9. Defect Management
10. Introduction to Automated Testing
